Getting Started: Readiness Checklist

4. Construction Program Considerations

Recommendations	Outcomes/Tasks	Done
Convene green team	• Convene all stakeholders to build support for a green whole-building approach for current and future construction projects	❒
Design a green construction project	• Include green building elements in your project's design, construction, and building maintenance methods, addressing concerns such as: – Low-impact lot development – Lot design and preparation – Resource efficiency – Energy efficiency and renewable energy – Water efficiency – Indoor environmental quality – Waste reduction and recycling	❒
	Remember to:	
	• Promote green building energy and money-saving opportunities	❒
	• Utilize systematic cost-saving measures to keep your budget aligned with project deliverables and milestones	❒
	• Implement a construction management plan that defines technical requirements, schedules, resources needed, and budget	❒
	• Create and utilize a public relations strategy to expand networking opportunities and gain visability and support for fundraising efforts	❒
Identify the materials requirements for your project	• Identify appropriate Green Building strategies and materials for the type of project you will be doing including but not limited to: – new construction – rehab – retrofit – weatherization – deconstruction	❒
